+ (809) 502-7738

• SECURITY OPERATIONS

- Alert validation and severity classification
- Incident documentation and escalation
- IOC enrichment using external intelligence sources
- Log correlation across Windows and Linux environments
- MITRE ATT&CK technique identification

SIEM & TECHNICAL SKILLS

SIEM & Log Analysis: Splunk (SPL basics), Elastic

(ELK), Windows Event Logs, Linux logs

Windows & Authentication: Event IDs 4624/4625, account activity, process creation events, Sysmon basics

Networking: TCP/IP, DNS, HTTP, VPN traffic concepts

Security Monitoring: Alert triage, IOC enrichment, phishing analysis, log correlation

Endpoint Security: EDR/XDR fundamentals

Scripting: Python (basic log parsing & investigation support)

Portfolio

<https://d9mond.github.io/Damien-Perdomo-Glletti-github.io/>

• PROFESSIONAL PROFILE

Junior cybersecurity professional with hands-on experience in SIEM monitoring, alert triage, log analysis, and structured incident investigation exercises. Familiar with Windows Event Logs, Sysmon telemetry, authentication analysis, phishing investigations, IOC enrichment, and multi-source log correlation using Splunk and Elastic. Strong foundation in networking fundamentals, Windows systems, and MITRE ATT&CK-based threat analysis. Available for rotating 24/7 SOC shifts.

• CERTIFICATIONS & TRAINING

- TryHackMe Security Analyst Level 1 (SAL1) – Certified
- Google Cybersecurity Professional Certificate
- Intermediate Cybersecurity Program – INDOTEL / IDB / Cymetria
- Advent of Cyber – TryHackMe

SOC INVESTIGATION PROJECTS

Investigated SIEM alerts involving suspicious logins, phishing, PowerShell execution, and network anomalies

Correlated Windows Event Logs, Sysmon, DNS, and firewall events to validate suspicious activity

Performed IOC enrichment using VirusTotal and analyzed domains, hashes, and IPs

Investigated phishing activity involving suspicious senders and blocked URLs

Documented findings using structured escalation workflows
